

Reclaim Control Over Non-Human Identities in Your Online Travel Agency's Cloud Platform

End-to-end protection for non-human identities and programmatic access to cloud services and data

Non-human identities are out of control. It's a huge challenge when organizations have 45X more non-human identities than human identities.

The Need

Online travel agencies, with their constant expansion of cloud-native stack find themselves challenged even more

- R&D teams in online travel agencies create non-human identities and scatter their secrets across vaults, code, collaboration solutions, and more without any oversight or control by security teams.
- Many companies work with the PCI DSS Practices for a more trustworthy and secure payment program, but PCI DSS is difficult to implement and maintain
- Non-human identity-based breaches are among the top two attack vectors and the most DESTRUCTIVE breach type to any online travel agency.

What are non-human identities (NHI)?
Programmatic access keys like service accounts, API-Keys, tokens, used by applications to access and authenticate against cloud services.

The Solution

With Entro, security teams can now manage non-human identities automatically, ensuring total security and compliance through seamless integration in one place. By managing your non-human identities, you can more simply enforce PCI DSS, troubleshoot issues, and respond to threats in real-time.

Detect

Discovery & Inventory

Discover all NHI at creation locations, Vaults and exposure locations for a full inventory

Classification

Enrich each NHI and secret to understand owners, permissions, usage, enablement, rotation time and more

Protect

Posture Management

Secure & manage non-human identities. Avoid risks & misconfigurations

NHI-DR

Monitor all secrets, NHI and vaults for any abnormal behavior

Remediate

Rotation & Vaulting

Streaming rotation and make sure all secrets are vaulted

Provision & Decommission

Remove stale and unneeded NHI to reduce your attack surface

What to Expect

- Proactively identify, prioritize, remediate and prevent non-human identity risks compromising your business.
- Visualize and track the activity of all NHIs- Comprehensive discovery across all organization's solutions.
- Understand risk and eliminate false positives - As NHIs are used across the supply chain and in production, Entro monitors the usage of these NHIs looking for any suspicious behavior.
- Agentless and frictionless. R&D agnostic.

Non-human identity management & protection designed for security teams
